No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                            Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC are cancer associated antigens expressed in patients afflicted with CC small cell lung cancer. The molecules provided by the invention can be used in the diagnosis, monitoring, research or treatment of conditions CC characterised by the expression of one or more cancer associated CC expression of a hCAAP, and determine regression, progression or onset CC expression or characterised by expression of an abnormal amount of a CCAAP, and determine regression, progression or onset CC expression or characterised by expression of an abnormal amount of a CCAP and non-small cell lung cancer, melanoma, colon, breast, head CC and neck, or transitional cancer, leimyosarcoma or synovial sarcoma. The present sequence is a DNA encoding human myc-associated Zinc-finger CC protein MAZ. This small cell lung cancer associated gene is designated CCAP as NY-SCLC-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine compositions, are also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of cDNA encoding novel rabbit low density lipoprotein binding protein 1 (LBP-2, see AAB82807). The cDNA was isolated following screening of a rabbit cDNA library for clones encoding LBPs that bound to both native low density lipoprotein (LDL) and methyl LDL. The invention provides claimed polynucleotides encoding novel polypeptides which are capable of binding to native and methylated LDL, the isolated polypeptides, termed LBPs, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Also claimed are methods of determining if an animal is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Low density lipoprotein binding protein 2; LBP-2; LDL; rabbit; atherosclerosis; antiarteriosclerotic; gene therapy; diagnosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel DNA sequence (I) whose expression products effect or are involved in the enzymatic biosynthesis, mutasynthesis or partial synthesis of polyketide or heteropolyketide compounds (II). (I) can be inserted into an expression vector and used to transform or transfect prokaryotic or eukaryotic cells with the aim of obtaining strains that produce large amounts of polyketide or heteropolyketide compounds, especially epothilones, which have cytotoxic and/or immunosuppressant and antibiotic and antifungal activities and are useful as plant-protection agents. This sequence represents the DNA sequence isolated from Sorangium cellulosum which is described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA sequence coding for products involved in the biosynthesis of polyketide or heteropolyketide compounds, especially epothilone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 37856 BP; 5655 A; 13666 C; 12913 G; 5622 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (GBFB ) GES BIOTECHNOLOGISCHE FORSCHUNG MBH.

The present sequence is that of the coding region of the human gene (see also AAB36494) encoding novel human low density lipoprotein binding protein 2 (LBP-2 see AAB82806). The gene was isolated from a genomic DNA library using LBP-2 cDNA as probe. The LBP-2 protein predicted from the present sequence differs from that predicted from a cDNA clone (see AAB82803) in that it contains an additional 321 amino acids at its N-terminus (the cDNA is a 5' truncation). LBP-2 nucleic acids are among claimed polynucleotides of the invention that encode novel polypeptides capable of binding to native and methylated LDL. Also claimed are isolated LBP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1614 BP; 243 A; 638 C; 564 G; 169 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            acid, and vaccine compositions, are also claimed

     The present sequence is that of genomic DNA encoding novel human low density lipoprotein binding protein 2 (LBP-2, see AAB82806). The DNA was isolated from a human genomic library by screening with LBP-2 cDNA (see AAH26494). The open reading frame spans 5 exons. Human LBP-2 nucleic acids are among claimed polynucleotides of the invention that encode novel polypeptides, termed LBPs, capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of
                                                                                                                                                New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis {\bf r}

Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine compositions, are also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               acute asthma; allergy; asthma; impeded respiration; respiratory distress syndrome; pain; cystic fibrosis; pulmonary hypertension; pulmonary vasoconstriction; emphysema;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The specification describes antisense oligonucleotides (AAX52869-X55271) directed against at least 2 mRNAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, gene initiation codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one or more diseases, conditions or mixtures. The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the participated for the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequenc

The present invention describes a library of human polynucleotides CC comprising the sequences given in ARI1752 to ARI1779. Also described is CC a method of detecting differentially expressed genes correlated with the CC cancerous state of a mammalian cell, comprising detecting at least one CC differentially expressed gene product in a test sample from a cell causected of being cancerous, where the gene product is encoded by one CC polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, CC mapping, tissue typing or profiling, forensics, genetic analysis and CC detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and CC arrays for diagnostics (which may be used to determine function of a cencoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to CC identify a genetic predisposition or susceptibility to a disease such as CC cancer). The polynucleotides of the invention are especially used in the CC cancer. The polynucleotides can also be used to screen for continuous and antagement of colorectal cancer, breast cancer, cancer, and polynucleotides can also be used to screen for contribute analyses and antagement of colorectal cancer, breast cancer.

RESULT 9
AAX02974
AAX02956-X03048 and AAX22301-X22304 are overlapping BAC genomic sequences containing alternatively spliced forms of human IL-Ira. Such fragments are used in the method of the invention which describes the isolation of a novel human TANGO-77 encoding nucleic acid and protein Tango-77 is a member of the cytokine superfamily that is expected to inhibit inflammation by binding to the interleukin-1 receptor (IL-IR). may also bind to a new receptor so could regulate other cellular processes associated with acute or chronic inflammation, e.g. asthma, chronic myelogenous leukaemia, rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tango-77; human; IL-1ra; cytokine superfamily; inflammation; inhibition; interleukin-1 receptor; IL-1R; regulation; asthma; rheumatoid arthritis; chronic myelogenous leukaemia; psoriasis; inflammatory bowel disease; growth factors; treatment; IL-1 receptor complex; BAC; ss.
                                                                                                                                                                Example 5; Figure 3; 226pp; English.

Nucleotide sequence of the stabilising sequence-encoding insert.

Fusion protein; stabilising polypeptide; proteolytic degradation; resistance; half-life; autoimmune disease; inflammation; nitro drug; resistance; protein; inflammatory bowel disease; in vivo imaging; nitroreductase protein; enzyme therapy; prodrug therapy; protease;

```
This is a nucleotide sequence of the stabilising sequence-encoding clasert. The invention provides a method for increasing the resistance of a core protein to proteolytic degradation that comprises linking or claserting onto or into the core protein a stabilising polypeptide of core protein to proteolytic degradation that comprises linking or classified into the core protein a stabilising polypeptide of coronals (Glya)X(Glyb)Y(Glyo)Zln where Glya, Glyb, Glyc are 1-6 coronals (Glya)X(Glyb)Y(Glyo)Zln where Glya, Glyb, Glyc are 1-6 coronals (Glya)X(Glyb)Y(Glyo)Zln where Glya, Glyb, Glyc are 1-6 coronals (Glya)X(Glyb)Y(Glyo)Zln where Glya, Glyb, Glyc are 1-6 coronals (Glya)X(Glyb)Y(Glyo)Zln where Glya, Glyb, Glyc are 1-6 coronals (Glya)X(Glyb)Y(Glyo)Zln where Glya, Glyb, Glyc are 1-6 coronals (Glya)X(Glyb)Y(Glyo)Zln where Glya, Glyb, Glyb, Alexandra (Glyb, Glyb)X(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)Y(Glyb)

                                                                                                                                    멍
                                                                                                                                                                             QY
                                                                                                                                                                                                                                                                                                                       CC (EBV) nuclear antigen protein 1 (EBNA), see AAY95856). EBNA1 is CC (LEBV) nuclear antigen protein 1 (EBNA), see AAY95856). EBNA1 is CC utilised in a novel method for obtaining a eukaryotic cell that is CC stably transfected with at least one episome. This method involves CC transfecting a eukaryotic cell with: (1) a first episome comprising a comprising a eukaryotic cell with: (1) a first episome comprising a comprising a eukaryotic cell with: (1) a first episome comprising a comprising an EBV orip and a gene encoding a second episome comprising an EBV orip and a gene encoding a second episome comprising an EBV orip and a gene encoding a second episome comprising an EBV orip and a gene encoding a second protein, where comprising an EBV orip and a gene encoding a second protein, where comprising an EBV orip and a gene encoding a second protein, where comprising a may be comprised on the selection of the first protein to produce doubly transfected cells which also express an antigen that promotes retention of the episomes by the cells. The doubly transfected cells are maintained under conditions in which the collist and second proteins and the selectiable marker is maintained. Onder these conditions, only cells containing both episomes live. Preferably, EBNA1 is expressed from 1 of the episomes, and the protein of interest from the other episome. Either or both comprise an uncleic acid sequence encoding a corpotein desired to be expressed in the cell (e.g. a therapeutic collists and the cell (e.g. a therapeutic collists and the cell (e.g. a therapeutic collists applicable to cell culture or intent organisms, for gene therapy. It allows the rapid comprises a gene of interest, using a novel method of selection, and considered confirms and novel method of selection, and considered confirms and another of the selection without the need for exogenous considered confirms and another of the cells.
                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Stably transfecting eukaryotic cells with at least one episome for the production of a desired protein in vitro and for gene therapy - \,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Q
밁
        The invention provides a composition comprising nucleic acid, histone HI protein and expression vector operationally encoding a protein suitable for tethering the nucleic acid to the histone HI protein, where the tethering protein is LANA. The composition is useful in aiding the retention of the viral DNA in the host cell. The viral vector encodes a protein suitable for tethering DNA to Histone HI. Methods for screening for compounds which are agonistic or antagonistic for the tethering of viral proteins to histone HI and DNA binding sites are useful for developing the method of viral transfer. The composition has applications
                                                                                                                                                                                                                                                                                                                                                                                                                                  CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents the Epstein Barr nuclear antigen. It is used to produce bait vectors of the invention. The specification describes a compositions and methods for a genetic system of detecting protein-protein interactions in a mammalian host cell. The system comprises bait and test, both containing selection genes, and viral origin of replications which require bound viral replication proteins to effect replication. The compositions is useful for detecting an interaction between a bait protein and a test protein. It is useful in

EBNA 1 protein is used to stably maintain episomes containing EBV origin of replication (orip) and a gene encoding protein or RNA of interest. Eucaryotic host cells expressing EBNA 1 protein are transfected with these episomes to produce recombinant cell lines expressing multiple genes of interest. This provides a rapid and reliable method of stably expressing multiple genes in transfected cells. The episomes are useful in the transfection of genes encoding receptors, transporter proteins, ion channels, adhesion molecules and transcription factors. The episomes carrying desired genes can also be used to transfect cells in gene therapy, antisense therapy, for gone smallfination cell immortalization action.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel method for generating an antisense library targeted to a selected RNA transcript. The methods can be used for identifying antisense agents and for identifying target sites for antisense-mediated inhibition of a selected gene. The use of a direct library for target site selection significantly simplifies the screening process, since only very small libraries need be prepared and assayed. This sequence represents the vector pShuttle which is used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Production of antisense libraries, used agents and for identifying target sites inhibition of a selected gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antisense; DNA library; identification; multiple cloning site; \mbox{\sc MCS}; inhibition; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Vector pShuttle DNA.
